AMERICAN EDITION

PREFACE.

THE present work represents an attempt made to gather together the Ka, Nebti, Horus, Suten Bât, and Rā names of the Pharaohs and royal personages of Egypt found on the monuments, and though the lists printed in it make no pretension to be complete, they are, I believe, the fullest hitherto published. I have drawn but sparingly for variants upon the unrivalled collection of scarabs in the British Museum, some 11,500 in number, because an exhaustive Catalogue of these is in course of preparation by Mr. H. R. Hall. Little apology is needed for the appearance of this work, for both the "Königsbuch" of Lepsius, and "Le Livre des Rois" of Brugsch and Bouriant have been out of print for some years. Moreover, since these works were issued the excavations carried out in Egypt by Amélineau, J. de Morgan, Naville, Petrie, Garstang, Quibell, Legrain, Daressy, and others have produced monuments inscribed with scores of royal names which were unknown to Lepsius, Brugsch, and Bouriant.

The grouping of the names into Dynasties is substantially that of Manetho, and transcripts of his King List, the Book of the Sothis, the Old Chronicle, the Table of Eratosthenes, etc., have been added for convenient reference. In the Chapter on Egyptian Chronology in the Introduction the reader will find the difficulties of the subject indicated, and the comparative table of the chronological systems which have been proposed from the days of Champollion Figeac to the present time will illustrate the divergence of opinion about a most troublesome branch of Egyptology. A list of recent papers bearing on the Chronology of Egypt has also been added.

I am indebted to Herr Adolf Holzhausen for the care which he has devoted to the printing of this book.

INTRODUCTION.

CHAPTER I.

EGYPTIAN ROYAL NAMES.

THE year 1849 is a memorable one in the annals of Egyptology, for it saw the appearance of the "Chronologie der Ägypter" by Richard Lepsius, to whom we owe so much work that is solid and enduring. Nine years later he published the supplementary volume entitled "Königsbuch der alten Ägypter", in which, for the first time, was published a series of synoptical tables of the Egyptian Dynasties, together with seventy-three tables containing nearly one thousand names of the kings of Egypt. This work was, and still is, of the first importance for the study of Egyptian chronology, for it represents the first serious attempt made by a competent scholar to reduce to order the confused chronological and historical statements made in Egyptian texts, and to compare the systems of Egyptian chronology formulated by writers in Greek, almost all of which are based upon the famous List of Egyptian Dynasties compiled by Manetho for Ptolemy Philadelphus. This investigation

in the domain of Egyptian Chronology threw much light on the subject, and at the same time incited other scholars to turn their attention to the correct arrangement of the historical facts which the results of the newly discovered decipherment of Egyptian hieroglyphics had placed in their hands. Lepsius's conclusions were undoubtedly the best which could be drawn from the facts available at that time, and they were adopted by Egyptologists generally throughout Europe, but his materials were insufficient for the scope of his work, and some of his chronological theories, in the face of the facts which have been steadily accumulating during the last fifty-one years, must now be rejected. That this is so is not to be wondered at, indeed the marvel is that so many of his theories have been proved correct by recent discoveries, and that so many of his guesses are supported by facts. To attempt to enumerate the important results which he formulated in the books mentioned above would be out of place here, but attention may be drawn to the fact that he was the first to show by the royal protocols which he published, that the greater number of the Pharaohs, and the Ptolemies and Roman Emperors after them, possessed five names, the import of which may be thus described:

The **FIRST** was the "Horus Name", or that which was borne by the king as the representative of Horus, the great god of heaven, whose symbol was a hawk. Originally this Horus was "Heru-ur", *i. e.*, "Horus the Great", the Arouëris of the later Greek writers, but in later periods his attributes included those of Horus of Behu̥t̥et,

the great War-god of Edfû and the district round about that city, and those of several other forms of Horus, among them being Horus "the son of Isis, the son of Osiris". The object of calling the king "the Horus" was, as M. Moret has aptly remarked, to indicate that he was the "son of the gods", and "son of Râ" in particular.¹ The Horus name of a king is that which was given to his *Ka*, or "Double", and it is written inside a representation of an object called the "Serekh", in the manner shewn here. The example given is the Horus name of Seneferu, the last king of the IIIrd, or first king of the IVth dynasty, and it reads *Neb Maât*, "Lord of Maât", i. e., "Lord of Right", or Truth, or Law; above the "Serekh" is the hawk of Horus wearing the Crowns of the North and the South. The *Ka*, as is well known, is a shadowy or ghostly form of the man, or a "shadowy second self", like the *Kra* of the Tshi-speaking peoples of the Gold Coast,² and the *Doshi* of the Ba-Huana.³ About the "Serekh" there has been some difference of opinion among Egyptologists. By some it has been regarded as a representation of a fringed banner, and by others as the plan of a building, more especially of a tomb.⁴

1. *Du Caractère Religieux de la Royauté Pharaonique*, Paris, 1902, p. 19.

2. A. B. Ellis, *The Tshi-speaking Peoples*, London, 1887, p. 149.

3. E. Torday and T. A. Joyce, *Notes on the Ethnography of the Ba-Huana*.

4. Maspero, *Revue Critique*, 1888, p. 118.

The most recent writer on the subject, M. A. Maret, regards it as the plan of either a temple or a tomb, wherein the Double of the king received both during his life-time and after his death the divine cult and the funerary cult.¹ And he shews that in placing the hawk of Horus on the "Serekh" the Egyptians intended to indicate that the king had taken his seat upon his throne as king, *i. e.*, had been officially enthroned. The custom of giving a Horus name to the king dates from the Ist dynasty, and proofs of this fact will be found *infra*, p. 8. Here we have the Horus names TCHA and KHENT, and if ĀḥA really be the Horus name of Menes, it follows that we have the Horus name of the first king of the Dynastic Period. The Nubian kings followed the Egyptians in adopting Horus names; thus Shabaka employed as his Ka name "Seqer-taui", Tirhākāh, "Qa-khāu", and Tanu-ath-Āmen, "Uah-mert". The Ka name of Cambyses the Persian was "Sma-taui"; of Alexander the Great, the Macedonian, "Heq-qennu"; of Ptolemy IV, the Greek, "Hunnu-qenu", or "Hunnu-qenu-skħā-en-su-tef-f"; and of Domitian, the Roman, Hunnu-qen. Some kings used their Ka name for their second and third names also. Thus "Neb-Maāt" was the first and second names of Seneferu (vol. I, p. 17); "Tet-Khāu" was the first and second names of Āssā (vol. I, p. 29); and "Ānkh-mestu" was the first, second, and third names of Usertsen I (vol. I, p. 53). Now Horus was in all periods associated with Set, in fact was the counterpart of this god, and we find

1. *Op. cit.*, p. 20.

from the monuments that one king at least possessed a name as the representative of Set, as well as that of Horus. Thus the Horus name of one of the kings of the IIInd dynasty was "Sekhem-âb", and his Set name was "Per-âb-sen"; in the former case the hawk of Horus  stands above the "Serekh", and in the latter , the symbol of Set (vol. I, p. 13). In another case the hawk  and the Set-animal are written above the "Serekh" which contains the Horus-Set name "Khâ se-khemui" (vol. I, p. 9).

The **SECOND** name of the king is preceded by the group of signs , the true reading of which, thanks to M. Daressy, is shown to be "Nebtî". In it the vulture  is the symbol of Nekhebit, the goddess of the city of Nekhebet, and the goddess of the South *par excellence*. Among the earliest representations of this goddess is that on the granite vase found by Mr. Quibell at Hierakonpolis.¹ In this we see the vulture of Nekhebit standing, with her right talon placed on the symbol of the "seal", , which contains the name of king BESH , and her left on the symbol of the union of the North and South  i. e., of Upper and Lower Egypt. Whether she appears as a vulture, or an uraeus, or a woman, she always bears or wears the symbols of the South, viz., the White Crown of the South , or  or the

1. *Recueil de Travaux*, tom. XVII. p. 113.

2. *Hierakonpolis*, Plate 37.

White Crown with feathers , or the papyrus plant , or the papyrus sceptre . The uraeus  in the group represents Uatchit, the goddess of the city of Pe-Tep, or Buto, the goddess of the North *par excellence*. Whether she appears as a serpent, or a woman, she always bears or wears the symbols of the North, viz., the Red Crown of the North , or , or the lotus plant , or the lotus sceptre . In a drawing by Lanzone,¹ she is represented in the form of an uraeus wearing , and she has before her the sceptre  and the seal . Thus the NEBT^I group means that the king represents the goddesses Nekhebit and Uatchit, and that he is the lord of the Two Egypts, or the Two Lands, *i. e.*, of the North and the South. The oldest form of the NEBT^I group is given by an ivory plaque in the Museum at Cairo, where it appears as ; in this the hawk symbolizes the South, and the serpent  the North. If we look at the royal names from the IIIrd to the XIIth dynasty it will be seen that the Horus name, or Ka name, and the Nebti name of many of the kings are the same, *e. g.*, Tcheser has  for both, Khufu has  for both, Mer-en-Rā has  for both, Pepi I. has  for both, Menthu-hetep Neb-taui-Rā has  for both, Sānkh-ka-Rā has  for both, Āmen-em-hāt I. has  for both, and so on. After the reign of Usertsen the first and second names of the king are usually different.

1. *Dizionario*, Plate LX.

The **THIRD** name of the king is that which is preceded by the signs , *Heru nub*, *i. e.*, "Horus of gold". It occurs for the first time in connexion with the name of Seneferu, the last king of the IIIrd or first king of the IVth dynasty, within a cartouche thus:

We also find  (vol. I, p. 20), and  (vol. I, p. 33). So far back as the IIIrd dynasty we find that Rā ☉ takes the place of Horus in the group, for in the titles of Tcheser we have  (vol. I, p. 16) instead of  of the later times. In the Palermo Stone, as M. Moret has already pointed out,¹ the third name of the king is called the "royal gold name"  . The general meaning of , when applied to the king, is that he is of, or like, the gold of Horus, *i. e.*, he is of the same substance as Horus, or Rā. Neb-taui-Rā Menthu-hetep called himself the "gold of the gods" (vol. I, p. 47), and gold, it is well known, has usually been associated with the gods. That the metal gold is really intended is clear from variants like , where the determinative for "metal" follows the name *nub* "gold" (vol. I, p. 77). In later times the name of Rā ☉ was added to , thus  ☉, as we find in the inscriptions of Heru-em-heb (vol. I, p. 154).

1. *Recueil de Travaux*, XXIII, p. 126.

The **FOURTH** name is preceded by  which, as is now known, is to be read *Suten Bāt*.¹ The first sign, *suten* , means "king of the South", and the second, , "king of the North", and together they indicate that the king to whom these signs are applied is "King of the South and North", *i. e.*, of Upper and Lower Egypt. The king is again held to be the successor of Rā, and therefore of every solar god, who was the lord of the two halves into which he divided the universe. The name which follows  is commonly called the "prenomen", and is written within an oval, , the *cartouche*, in Egyptian *shennu* ; the fact that cartouches contained royal names was first pointed out by Zoëga, before the close of the XVIIIth century.² The oldest form of the cartouche is circular, and from the scene on the vase of king BESH  it is clear that the circle with a bar attached was intended to represent a ring with a flat bezel, or seal-ring. This, of course, symbolized the *shen* , or circular course of the sun about the universe, and when the king's name was written inside it, the meaning was that the king was the representative of the Sun god, that his rule extended to every part of the course of the sun, and that both he and his name would, like the sun,

1. A summary of the discussions on the reading is given by Moret, *op. cit.*, p. 27.

2. *De Usu et Origine Obeliscorum*, Rome, 1797, p. 465.

endure for ever. On some reliefs the cutting of the cartouche suggests that the name within it was enclosed by a rope or cord the ends of which were tied together in an elongated knot. The use of cords and knots in magical ceremonies is too well known to need description here, but if the cartouche was supposed to be formed by a rope, we may assume that the rope was intended to give magical protection to the name.

Another form of  is supplied by the Palermo Stone in connexion with the name of Seneferu, where we find

The two crowns, one of the South , and one of the North , were clearly intended to represent , and to indicate that "Seneferu" was the king's name both as Lord of the South and Lord of the North. In the early period the groups  ,  ,  , and , when prefixed to the names of kings appear had much the same meaning. The title  is sometimes written within the cartouche, e.g., in the example quoted above, p. XVII, and it is clear that under the early dynasties any

or all the titles prefixed to the royal names might be so written at times. In fact, custom had not yet definitely decided what the cartouche should or should not contain. There is no doubt that the fourth name of the king was a solar name, for the god whose name is always mentioned in it is Rā, the Sun-god; and we have proof of this from monuments from the middle of the IVth dynasty downwards. In the *Suten Bât* names of the earlier kings of the IVth dynasty, *e. g.*, Seneferu and Khufu, the actual name of Rā is not mentioned, but its existence seems to be implied in both.

If we examine the *Suten Bât* names of certain families of kings it becomes clear that a well recognized rule underlay their formation. Thus Amen-hetep I was called "Tcheser-ka-Rā", or "Holy is the Ka of Rā"; and Thothmes I, "Aa-kheper-ka-Rā", or "The Ka of Rā becometh great"; Thothmes II, "Aa-kheper-en-Rā", or "Great is the becoming of Rā"; Hatshepsut, "Maāt-ka-Rā", or "True is the Ka of Rā"; Thothmes III, "Men-kheper-Rā", or "Stable is he who is created by Rā"; Thothmes IV, "Men-kheperu-Rā", or "Stable are the creations of Rā"; Amen-hetep II, "Aa-kheperu-Rā", or "Great are the creations of Rā"; Aï, "Kheper-kheperu-Rā-āri-Maāt", or "The Creator of creations is Rā, the maker of Maāt"; Tut-ānkh-Āmen, "Neb-kheperu-Rā", or "Lord of creations is Rā"; Heru-em-heb, "Tcheser-kheperu-Rā", or "Holy are the creations of Rā"; Amen-hetep III, "Neb-Maāt-Rā", or "Lord of Maāt is Rā". The subjects chosen in these prenomens are the Ka of

Rā, Maāt, *i. e.*, Right or Truth, and the created one, or creations, of Rā. The formation of the prenomen of Amen-ḥetep IV is different from that of all the other kings of his dynasty, but this is not to be wondered at, seeing that he held theological opinions different from those of the other kings. Moreover, in his prenomen as Khu-en-Āten he added the words "Beloved of the Disk", *meri Aten*.

It seems too that the prenomens of the kings of one dynasty influenced the formation of those of the kings of another. Thus the prenomen of Āāḥmes I, the first king of the XVIIIth dynasty, is "Neb-pehti-Rā", and that of Rameses I, the first king of the XIXth dynasty, is "Men-pehti-Rā". The prenomen of Amen-ḥetep III is "Neb-Maāt-Rā", and that of Seti I is "Men-Maāt-Rā". The "User-Maāt-Rā" of Rameses II is repeated in the prenomens of Rameses III, Rameses IV, Rameses V, Rameses VII, Āmen-em-āp, Thekeleth I, Uasarken II, Uasarken-sa-Āst, Thekeleth-sa-Āst, Shashanq III, P-ānkhī, a Nubian, etc. Another example of the above-mentioned fact is supplied by the prenomens of the kings of the XXVIth dynasty. Thus Psammetichus I is called "Uah-āb-Rā", or "Rā maketh prosperous the heart"; Nekau, "Nem-āb-Rā", or "Rā reneweth the heart"; Psammetichus II, "Nefer-āb-Rā", or "Rā is the beauty of the heart"; Uah-āb-Rā, "Hāā-āb-Rā", or "Rā rejoiceth the heart"; Āāḥmes, "Khnem-āb-Rā", or "Rā uniteth himself to the heart". Finally it may be noted that although the name of Rā is always the first sign

in the cartouche containing the SUTEN BĀT name, it is to be read last, except in some few names, *e. g.*, Rā-messu, or Rameses, and 'Pātolσης in Manetho's IVth Dynasty, which must represent some name beginning with Rā. This fact is proved by Assyrian, Greek, and Hebrew transcriptions of Egyptian royal names. Thus in the Tell al-Amarna Tablets *Men-kheper-Rā* (○  ) (Thothmes III) is transcribed by *Ma-na-akh-bi-ir-ya*; *Neb-Maāt-Rā* (○  ) (Amen-hetep III) is transcribed by *Ni-im-mu-u-ri-ya*; and *Nefer-kheperu-Rā-uā-en-Rā* (○   | ○   ) (Amen-hetep IV) is transcribed by *Ni-ip-khu-ur-ri-ri-ya*. Again, *Tet-ka-Rā* (○  ) is transcribed in Greek by Τανχέρης, and where the name Horus occurs instead of Rā it comes last also, as in *Mενχερης* = (○   ), and *Uah-āb-Rā* (○  ) is transcribed in Greek by Απρής, and in Hebrew by *Khophrā* עֲפָרָה.

The FIFTH name of the king was the "son of Rā", (○ ), name, which was, like the SUTEN BĀT name, written inside a cartouche. The title "son of Rā" was sometimes written with the name, inside the cartouche, as in the cases of Unās, (○  ) (vol. I, p. 31), and Āntef-āa (○  ) (vol. I, p. 44), sometimes after the cartouche, outside it, as in the case of Pepi II, (○  ) (vol. I, p. 36), but more usually before the cartouche, immediately after that containing the SUTEN BĀT name. Thus the fourth and fifth names of

the king were “solar names”, but the fifth did not necessarily carry with it sovereignty. The fifth name of the king seems to have been his private name, or that which was given him at his birth, but though it appears to be certain that every king must have had such a name, the “son of Rā” names of many of the early kings have not come down to us. This is the case with the great kings Tcheser, Seneferu, Khufu, Khāfrā, Menkau-Rā, and others, and it is not until the end of the Vth or beginning of the VIth dynasty that “son of Rā” names become general. The first “son of Rā” name known to us seems to be Åssia ; the fourth and fifth names of Unás are alike, and this is also the case with Tetá (vol. I, pp. 30, 31). The various foreign kings who ruled Egypt usually adopted Egyptian titles for their SUTEN BĀT names, and had transcriptions of their own names placed in their second cartouche; compare the names of Cambyses and Darius, vol. II, pp. 91, 92. On the other hand, Xerxes used his private name for both his fourth and fifth names (*ibid.*, p. 94), and Artaxerxes prefixed  to his private name. The Macedonians and Ptolemies adopted Egyptian titles for their fourth names, and their own private names became their fifth names. Alexander the Great added to his fifth name the words “son of Amen” (vol. II, p. 107), and every Ptolemy, with the exception of Soter and Philadelphus, added the titles “ever-living”, and “beloved of Ptah”, or “beloved of Isis”, or “beloved of Ptah and Isis”, to his private name in his second cartouche.

Several of the Roman Emperors dispensed with Egyptian titles in their first cartouches, and as SUTEN BĀT names they employed first "Autokrator", and later "Autokrator Caesar". Their "son of Rā" names were their private names, after which they added titles, like the Ptolemies. Thus in the second cartouche of Caesar Augustus was inscribed "Caesar, ever-living, beloved of Ptah and Isis"; in that of Tiberius, "Tiberius Caesar, ever-living"; in that of Caligula, "Caius Caesar Germanicus, ever-living"; in that of Claudius, "Claudius Tiberius", or "Germanicus Autokrator"; in that of Nero, "Autokrator Nero"; etc.

The Nubian kings of the Northern Kingdom whose capital was at Napata (Gebel Barkal) usually followed the custom of the Egyptians in placing their private names in their second cartouche, *e. g.*, Senka-Āmen-seken, Athlenersa, Amathel, etc.; on the other hand, one of them adopted for his fourth name the title "Sameri-Āmen", and for his fifth, "Heru-sa-ātef" (vol. II, p. 203). The kings of the Southern Kingdom, who had their capital at Meroë, used cartouches in a somewhat irregular way. A few of them followed the custom of the Egyptians and inscribed titles in their first cartouche, and their private names in their second cartouche. Thus the first cartouche of Netek-Āmen contains the title "Kheper-ka-Rā", and the second his private name "Netek-Āmen" (vol. II, p. 209); and his queen placed in her first cartouche "Mer-ka-Rā", and in her second her private name "Āmen-tari", or "Āmen-

tarit". We also find one queen with "Amentarit"
 as her prenomen, and "Kenthâhebit"
 as her nomen (vol. II, p. 206). Arkenkherl had three cartouches: in the first he placed his prenomen "Ankh-ka-Râ", in his second, "Second priest of Osiris, lord of the South", and in his third, "Arkenkherl", his private name. One king made "Kalka"  his SUTEN BÂT name, and "Karterâ", or "Kalterâ"  his "son of Râ" name (vol. II, p. 207).

It now remains to note the other titles which were prefixed to the cartouches of kings. These were:—

1.  (= ) *Neb tauui* "Lord of the Two Lands", either the two halves of the universe, *i. e.*, the North and the South, or Upper and Lower Egypt, or the two lands, one on each side of the Nile, (vol. I, p. 50.) This title was sometimes placed inside the cartouche.

2.  *Neter nefer*,¹  (vol. II, p. 76), *i. e.*, "Beautiful god", or "Well-doing god".

3.  *Neb ari khet*, *i. e.*, "Lord, creator of things", or "Lord who created the world".

4.  *Ta ankh Râ mä tchetta*, *i. e.*, "Giver of life, like Râ, for ever" (vol. I, p. 59).

1. Fem.  (vol. I, p. 121).

5. *Neb khādu*, i. e., "Lord of crowns" (vol. I, p. 103).

6. *Ankh utcha senb*, i. e., "Life, strength, health [be to him]" (vol. I, p. 113).

7. *Suten Bāt*, i. e., King of the South and North (vol. I, p. 130).

8. *sa Rā*, i. e., "Son of Rā" (vol. I, p. 151).

9. *Per āa*, i. e., "Great House", the "Pharaoh" of the Bible; we also have *Per-āa pa āa* "The great Pharaoh" (vol. II, p. 94).

10. Many of the titles of the Ptolemies were translated into Egyptian thus:—

Ptolemy I. NETCH "Divine Avenger" = SOTER.

Ptolemy II. NETER MER-SEN "Divine loving brother" = PHILADELPHUS. or = the two brother-loving gods. The fem. is .

Ptolemy III. P-NETER-MENKH "The beneficent god" = EUERGETES. The fem. is , and the dual .

Ptolemy IV. NETER MER-TEF-F or "God loving his father" = PHIOPATOR.

The fem. is  and the dual 
, or .

Ptolemy V. P-NETER PER  "The god who appeareth" = EPIPHANES. The fem. is  and the dual , .

Ptolemy VI(?). P-NETER-SHEPS (?) -TEF-F, "The god who sanctifies (?) his father" = EUPATOR.

Ptolemy VII (?). P-NETER-MUT-F-MERI , or , or , "The god loving his mother". The dual is .

In Roman times the following variants are found:

For  we have , , .

For  we have , , , , 
, .

For  we have , , , etc.

For  we have , , , , 
, , , .

CHAPTER II.

EGYPTIAN CHRONOLOGY.

Egyptian chronology has, at intervals, during the last six thousand years, formed a subject of curiosity and study among the learned, but in spite of this the matter is full of difficulties, and at the present time no general agreement, even as to fundamental questions, has been arrived at. The "Palermo Stone"¹ shews that under the Ancient Empire the Egyptians possessed a series of Annals of the kings of the early dynasties, and that they had traditions, of a more or less historical character, which preserved the names of some of the kings who reigned before the union of the Kingdoms of the South and North by Menā, or Menes. The evidence of this monument makes it clear that the principal events of each year were carefully noted from the beginning of the 1st Dynasty downwards, and the fragment of the Stone which has come down to us gives valuable indications as to the probable length of the period that must be assigned to the first five dynasties. Up to the present no similar monument recording the Annals of the later dynasties has been found, but certain lists of kings, which are more or less complete, are available, and these may be briefly mentioned.

1. First published by Pellegrini in *Archivio storico Siciliano*, N. S., tome XX, pp. 297—316, with plates.

The most complete of these is contained in the famous “**ROYAL PAPYRUS OF TURIN**”, which is now in the Museum of Turin.¹ Its value was first recognized by Champollion le Jeune, who described it as a “tableau chronologique, un vrai canon royal”. The papyrus was despatched in a box to Turin, but without packing, and when it arrived at its destination it was found to be broken into scores of little pieces, which lay in a heap at the bottom of the box. In 1826 Seyffarth went to Turin and undertook the work of rejoining the fragments, and he reconstructed a roll of papyrus of twelve columns or pages, each column containing 26 to 30 names of divine or human kings. The “restoration” of the Papyrus by Seyffarth was condemned by Rosellini, Birch, de Rougé, and others, and it seems quite certain that in some places at least the rejoining of the fragments was directed by guesswork. The text of the papyrus is written in the hieratic character and, when complete, may have, as Dr. Birch calculated, contained the names of about three hundred and thirty kings, which he thought coincided with the three hundred and thirty kings mentioned by Herodotus (Bk. II, § 100). The lengths of the reigns of certain kings were given in years, months, and days. Recently the Papyrus has been carefully studied by Dr. Eduard Meyer, who declares that he has derived from his examination of it some indications of importance chronologically.

1. See Lepsius, *Auswahl*, plates 3—6.

The next King List of importance is that which is commonly known as the **TABLET OF ABYDOS**; it was discovered by Dümichen in the Temple of Osiris at Abydos in 1864. On the Tablet we see Seti I, accompanied by his son and successor Rameses II, addressing 75 of his predecessors, whose cartouches are arranged in chronological order before him; the list is ended by Seti's own name. A third King List is known as the **TABLET OF SAKKĀRAH**; it was found in the tomb of Thunurei, , a royal scribe and "chief reader", who flourished in the reign of Rameses II. It contains 50 royal names, including the name of Rameses II; when complete the number of royal names on the Tablet was 58. Here also may be mentioned a second King List from Abydos, made for Rameses II, the remains of which are in the British Museum (Northern Egyptian Gallery, No. 61), and the **TABLET OF KARNAK**.¹ Of the arrangement of the kings' names on the latter no satisfactory explanation has yet been given, but it is of value because it gives the names of several kings of the XIth and XIII—XVIIth dynasties.

The following are the royal names on the **TABLET OF ABYDOS** and **TABLET OF SAKKĀRAH**:²—

1. See Lepsius, *Auswahl*, plate 1; the most recent copy of this monument is that published by Sethe.

2. The readings of some names are corrected by the new collations of the Lists made for Prof. Meyer.

Now if we compare these lists of kings with each other, it becomes at once clear that, although they are both supposed to cover the same ground, they differ considerably in many places. Thus the Tablet of Ṣakķārah opens with the name of Merbapen, which is the sixth in the Tablet of Abydos, and the Tablet of Abydos contains a batch of eighteen names for which there is no equivalent in the Tablet of Ṣakķārah. We are therefore obliged to conclude that those who drew up these lists have only given us series of selected names. Moreover, monuments bearing numbers of royal names which are not included in either list are well known to Egyptologists. The order of the names is substantially the same in each list, but we may note that in the Tablet of Ṣakķārah names Nos. 37—46 are written in reverse order. Each list stops at the beginning of the XIXth dynasty, and therefore we can obtain no help from either in constructing a list of the remaining kings of that dynasty, or of the following dynasties. For help in this difficulty recourse must be had to the famous List of Kings, which tradition says was drawn up for Ptolemy Philadelphus in the third century before Christ by MANETHO of Sebennytus. This List formed part of his Αἰγυπτιακά, and in it he divided the kings of Egypt into thirty Dynasties. The first section dealt with the mythological part of the history of Egypt, and with Dynasties I—XI; the second with Dynasties XII—XIX, and the third with Dynasties XX—XXX. His work is lost, but four versions of the King List are

extant,¹ and are found in the "Chronography" of GEORGE THE MONK, the Syncellus of Tarasius, Patriarch of Constantinople, who flourished in the VIIIth century of our era. The oldest version of the King List is that of the Chronicle of JULIUS AFRICANUS, a Libyan who flourished early in the IIIrd century A. D., which is preserved in the Chronicle of EUSEBIUS, Bishop of Caesarea (born A. D. 264, died about 340). Eusebius himself gives a King List, which contains many interpolations. If the versions of the King List of Manetho according to Africanus and Eusebius be compared, it will be seen that they do not agree in the arrangement of the dynasties, or in the lengths of the reigns of the kings, or in the total number of kings assigned to the different dynasties. Thus Africanus makes 561 kings reign in 5524 years, while Eusebius gives the number of kings as 361, and he says their total reigns amount only to 4480, or 4780 years. The version of Africanus agrees better with the monuments than that of Eusebius. It is probable that Manetho drew on the writings of the best authorities available in his time, but it is very doubtful if the sources of his information were complete or wholly trustworthy. We may, however, be quite sure that his compilation was generally regarded as a valuable work for some centuries after his death, and that he was held to be a great authority

1. See *Fragmenta Historicorum Graecorum*, vol. II, ed. Didot; Bunsen, *Egypt's Place*, vol. I, Appendix; Lepsius, *Königsbuch*, Berlin, 1858.

on Egyptian history and chronology, or we should not find literary impostors of ancient days endeavouring to obtain circulation for their own pseudo-historical works by issuing them under his name. Manetho must not be blamed for the mistakes which his editors and copyists made, but, on the other hand, he can at best only have repeated Ptolemaic traditions, based, no doubt, on King Lists which were as incomplete as the Tablet of Abydos and the Tablet of Ṣakkarah.

In dealing with Egyptian Chronology it must always be remembered that, comparatively speaking, little is known about it. Many writers on the subject have spent much time and ingenuity in trying to make facts derived from the monuments square with Manetho's King List, and the result of their torturing of the figures and their manipulation of the names has frequently obscured the truth. Some investigators have misused facts in their endeavours to frame a system of Egyptian Chronology, which should harmonize with Archbishop Ussher's dates given in our Bibles, and others, with more ingenuity than knowledge, have framed schemes which the monuments now available contradict on most points. To construct a perfectly complete series of the kings of Egypt, with their dates, we need a complete set of monuments which would tell the order of the succession of the kings, and the length of each king's reign. Such a set of monuments does not exist, and therefore no complete system of Egyptian Chronology can be formulated. A sufficient number of royal mo-

numents does exist to justify the making of a general assumption as to the probable length of the period of Dynastic Civilization, but not to make a detailed scheme of its chronology; these facts are proved by the differences that exist in the various systems of Egyptian Chronology which have been proposed in recent years. A system which is, however, *approximately* correct can be framed, and to make this recourse must be had to the monuments.

Now, we find in the Pyramid Text¹ of Pepi II, a king of the VIth dynasty, an allusion to the "gods who were born on the five days which are added to the year". This shews at once that the Egyptians were at that time using, for the ordinary purposes of daily life, a year to which they were in the habit of adding five days² in order to make it equal to the length of the true year, as they understood it. In other words, they had a vague year, or wandering year, or calendar year, of 365 days.³ This year was divided into three seasons, each of which contained four months. The first season was that of the Inundation which was called  SHAT(?), or AKHET, and began in July; the second

2.  Brugsch, *Thesaurus*, pp. 231—233, 479.

3.  "The 365 days of the year". Brugsch, *Thesaurus*, p. 249.

season was called ☰ PERT, and began in November; the third season was called ☱ SHEMU (coptic ψωμ), and began in March.¹ Roughly speaking, these seasons corresponded to Winter, Spring, and Summer. Each month of these seasons contained 30 days. The four months of each season were called the first, second, third, and fourth month of that season. In late times the Copts gave to the twelve months names which were derived from the names of old Egyptian gods, festivals, etc., thus:—

EGYPTIAN.		COPTIC.
1st month of the Inundation (Winter)		Thoth.
2nd "	"	Paophi.
3rd "	"	Athyry.
4th "	"	Khoiak.
1st "	"	Tybi.
2nd "	"	Mekhir.
3rd "	"	Phamenoth.
4th "	"	Pharmuthi.
1st "	"	Pakhon.
2nd "	"	Payni.
3rd "	"	Epiphi.
4th "	"	Mesore.

The calendar containing twelve months of 30 days each survived for magical purposes until the beginning

1. According to Meyer (*Aeg. Chron.*, p. 43) Akhet began on July 19 and ended Nov. 15; Pert on Nov. 16 and ended March 15; and Shemu on March 16 and ended July 13; then followed the "five days over the year".

of the New Empire at least. Thus on the back of a papyrus in the British Museum there is a complete 360-day calendar containing twelve months, each of thirty days, and each day is supposed to be divided into three parts, which are marked lucky † , or unlucky ‡ . It may be noted in passing that the Babylonians possessed a similar calendar, a fact proved by tablet No. 32641 in the British Museum, which contains a list of twelve months, each of 30 days, lucky and unlucky, etc. The text is published by Rawlinson in *Cuneiform Inscriptions of Western Asia*, vol. V, plate 48.

Now, it is clear that since the wandering, or calendar, year of 365 days was shorter than the true year by nearly a quarter of a day, every fourth wandering year would be shorter than the true year by nearly a whole day, and that given a sufficient number of years, the wandering year would work backward through all the months of the year until at length the first day of the wandering year would coincide with the first day of the solar year. This fact was discovered by the Egyptians at a very early period, and they found it necessary to employ another year which more closely resembled the true year in length. This second year began about the time of the Inundation, and its first day was declared to be that on which the star Sirius, or Sothis,¹ rose heliacally, *i. e.*, with the Sun. This year

1. In Egyptian *Sept* \triangle°
 \star .

began on July 19 or 20; it is called the "Sothic Year", and contained $365\frac{1}{4}$ days, *i. e.*, a few minutes more than the true solar year. The Egyptians found the wandering, or calendar, year sufficiently accurate for all the general purposes of life, but, unfortunately, it does not help the modern investigator to ascertain chronological data with sufficient exactitude for historical purposes. It is therefore necessary to look in the inscriptions for mentions of the risings of the star Sothis, expressed in terms of the wandering, or calendar, year, and if these can be found it is possible to arrive at fixed points in Egyptian chronology, for 1461 wandering, or calendar, years are equal to 1460 Sothic years, *i. e.*, one Sothic period, provided that it can be stated when the Sothic period referred to ended or began. Now the inscriptions do, fortunately, contain mentions of risings of the star Sirius expressed in terms of the wandering year, but they do not state when any Sothic period ended or began, indeed it is doubtful if the Egyptians know of the existence of the Sothic period.¹ Mr. Torr, after pointing out that Sirius did not really rise at intervals of exactly $365\frac{1}{4}$ days, that the cycle of Sirius did not really amount to four times $365\frac{1}{4}$ years, or 1461, that a Sothic period which ended at Alexandria A. D. 139 would really have begun there in B. C. 1318, and that further south the beginning and the ending would both have been considerably later, as the date of rising varies

1. See Brugsch, *Thesaurus*, p. 203.

with the latitude, comes to the conclusion that the Sothic period, or cycle of Sirius, was invented by the later Greeks at Alexandria.¹ Further, he thinks that "there is very little hope of correcting any dates in history by reference to the cycles of the phoenix and the dog-star, or other things pertaining to the calendar".²

The facts brought forward by those who think that a correct system of Egyptian Chronology can be founded on the notices of the risings of Sirius mentioned in the inscriptions may now be briefly noticed. The ablest supporter of this view is Prof. E. Meyer, who assumes the existence of three Sothic Periods which began respectively³ on

July 19 B. C. 1321-20 — 1318-17

July 19 B. C. 2781-80 — 2778-77

July 19 B. C. 4241-40 — 4238-37

The date of the ending of the Period which began B. C. 1321-20 is obtained from the statement of Censorinus⁴ who, writing A. D. 238 about the Egyptian year, says that it is reckoned from the first day of the Egyptian month of Thoth. He then goes on to say that the first day of the year in which he was writing was the first of Thoth, and that its equivalent was the

1. *Memphis and Mycenae*, p. 57.

3. *Aegyptische Chronologie*, p. 28.

4. *De die natali*, XVIII. 10.

VIIth day of the Kalends of July, or June 25, and adds that this was also the case one hundred years before A.D. 139), when the equivalent of the first of Thoth was the XIIth day of the Kalends of August, or July 21, on which day the Dog-star (Sirius) is wont to rise. According to Professor Meyer, Censorinus made a mistake in the last statement, since in 139 Sirius rose heliacally on July 20, not July 21.¹ Assuming that the statement of Censorinus is correct, the Sothic period preceding that in which he lived ended in B.C. 1321-20, the one before that in 2781-80, and so on. The whole theory of the existence of a system of Sothic periods rests in fact upon the words of Censorinus.

Having assumed that Censorinus is a credible witness Prof. Meyer goes on to give three instances in the inscriptions in which the risings of Sirius are expressed in terms of the years of the wandering year. The first is found in the Ebers Papyrus, the second is in a fragment of a calendar, said to be of the time of Thothmes III, inscribed on a block of stone at Elephantine,² and the third is in the Kahun papyri.³ The first mention states that the rising of Sirius, *pert Sept* , took place on the day of the festival of the New Year which was celebrated on the 9th day of the third month of the season of the Inundation, i. e., the 9th of the

1. *Op. cit.*, p. 24.

2. Lepsius, *Denkmäler*, III, plate 4c; Brugsch, *Thesaurus*, p. 363a.

3. *Aeg. Zeit.*, vol. XXXVII, p. 99 ff.

eleventh month of the year, in the 9th year of king Tcheserkara, or Amen-hetep I

According to the calculations of Prof. Meyer, the 9th year of the reign of Amen-hetep I fell on one of the four years B.C. 1550—49 to 1547—46, and the first year of his reign fell in the period B.C. 1558—57 to 1555—54. Now this passage was discussed by Mr. Torr twelve years ago,¹ and he argued thus: "Had there been "365 days to the year, day 9 of month 11 would have "57 days from day 1 of month 1 in the year after; "and then year 9 of king Ser-ka-Rā would have been "assignable to 1550 B.C., that being four times 57 years "before 1322 B.C., the supposed date of the rising of "the dog-star on day 1 of month 1. But this calendar "proceeds from day 9 of month 12 to day 9 of month 1 "just as it proceeds from day 9 of any other month to "day 9 of the next; so that it clearly is intended for "the year of 360 days with twelve months of thirty days "apiece and nothing added." His conclusion is: "And "thus it will not serve to fix the date of Ser-ka-Rā "Amen-hetep, as there is nothing to fix the date at which "the dog-star rose on day 1 of month 1 in these years "of 360 days apiece."

1. *Memphis and Mycenae*, p. 57.

The second mention of the rising of Sirius given by Prof. Meyer is in these words:  i. e., the appearance of Sirius took place on the 28th day of the third month of the season of the Inundation, that is, on the 28th day of the 11th month of the year, and on this day the customary offerings were made. Here there is given neither the name of a king, nor the year of his reign. It is, however, asserted boldly that the mention belongs to the reign of Thothmes III, because this king's name is found on another fragment (published by Lepsius, *Denkmäler*, III, 43f) which is said to belong to it. As a result of his calculations Prof. Meyer has concluded that Thothmes III reigned from 3rd May B.C. 1501 to 17th March 1447. This rising of Sirius has also been discussed by Mr. Torr, who says: "With a year of 365 days this would put the rising 38 days before day 1 of month 1; and thus it might be taken to refer to 1474, that being four times 38 years before 1322 B.C. But there is nothing in the fragments of this calendar to show whether the year had 365 days, or only 360; and as the fragments came from Elephantine, the calendar was probably intended for a southern latitude in which the time would not be reckoned from 1322. In any case, however, this calendar is useless as a guide to history, since it cannot be assigned with certainty to any king. It doubtless was inscribed upon a building of king Men-cheper-Ra Thothmes: but it

"may have been inscribed there by one of his successors."¹

From the third mention of the rising of Sirius discussed in his work Prof. Meyer concludes that the 7th year of the reign of Usertsen III fell in the period B.C. 1882—81 to 1879—78, and the first year in the period B.C. 1888—87 to 1885—84.² From what has been said above it is clear that the three risings of Sirius quoted by Prof. Meyer took place in the Sothic period which began according to him B.C. 2778—77 and ended B.C. 1318—17. In the preceding Sothic period, *i.e.*, that which began B.C. 4241—40 and ended B.C. 2778—77, no point is fixed by him, but he assumes that Menā, the first dynastic king of Egypt, began to reign about B.C. 3315, and that the first year of this Sothic period (B.C. 4241—40) witnessed the introduction of the Calendar. His general results are thus tabulated:

	B.C.
Menā, or Menes	3315
Dynasties 1 and 2,	18 kings in 420 years
Dynasty 3,	4 kings in 55 "
Dynasty 4,	160 years
Dynasty 5,	140 "
Dynasties 6—8,	181 "
Dynasties 9 and 10,	200 "
Dynasty 12 begins	2000

1. *Op. cit.*, p. 58.

2. See also *Nachträge zu ägyptischen Chronologie*, Berlin, 1908, p. 18.
d*

	B. C.
Dynasty 12 ends	1791
Dynasties 13—17, about 200 years	1789—1589
Dynasty 18 begins	1580
" " ends	1321
The Era of Menophreôs (Rameses I) begins	1321, July 19
Dynasty 19	1320
Dynasty 20	1200—1179.

Omitting for the moment any mention of the lengths of the reigns of the kings of dynasties 21—31, we may compare Prof. Meyer's results with the systems of Egyptian Chronology proposed by other Egyptologists, which are tabulated on pp. LIV, LV.

A glance at the table there given will shew how greatly the authors of these systems vary in their estimates of the length of the period of dynastic civilization, and in the dates which they assign to the reign of Menes, the first dynastic king. Champollion Figeac, Boeckh, Mariette, and Petrie give the highest dates, Bunsen, Lepsius, and Lieblein give the lowest, and Brugsch takes a middle course. The obvious deduction which may fairly be made from this array of conflicting figures is that Egyptian Chronology is either a very inexact science, or that very little is known about it. The greater number of these systems we may now disregard, for they were formulated at a time when Egyptology was, comparatively speaking, in its infancy, but all are instructive as illustrating the difficulties which beset the subject. The systems which agree most closely with the

results of modern investigators are those of Bunsen, Lepsius and Lieblein, and after them comes the system of Brugsch. This distinguished scholar assigned to Menes the date B. C. 4400, to the VIth dynasty B. C. 3300, to the XIIth B. C. 2466, to the XVIIIth B. C. 1700, and to the XIXth B. C. 1400, whilst those of Prof. Meyer are B. C. 3315, 2540, 2000, 1580, 1320, respectively. In fixing his earliest date Brugsch was probably influenced to some extent by Manetho's King List. It seems clear that he made the interval between the VIth and the XIIth, and that between the XIIth and XVIIIth dynasties too long, that he allowed too few generations to a century, and that his dates for the kings of the XVIIIth dynasty must be modified. In spite of all this, however, it seems to me that the period of 4400 years which he assigned to dynastic civilization agrees more closely with the general facts of Egyptian chronology and history than the 5867 years of Champollion Figeac, or the 3315 years of Prof. Meyer. In arriving at conclusions about a subject like Egyptian Chronology where, comparatively, so few exact data exist, wide and general knowledge of every branch of Egyptology and mature judgment count for a great deal, and in these respects Brugsch had no rival, except in Professor Maspero. It is impossible to think that Brugsch did not consider carefully the mentions of the risings of Sirius in the Ebers Papyrus and on the calendar fragment from Elephantine, and also what conclusions could be drawn from them for the purposes of chronology. The state-

ment of Censorinus was well known to him, and he himself discussed¹ the effort made to reform the calendar by Euergetes I, B. C. 238, but still we do not find that he attempted to form a system of Egyptian chronology by means of the mentions of the risings of Sirius. In his *Thesaurus*² he states boldly that the monuments contain no mention either of the Sothic period or the Phoenix period,³ and that he thought the use of the wandering year by the Egyptians was inseparable from the knowledge of a fixed solar year.⁴ These facts suggest that Brugsch believed the Sothic period to have been invented at a late period, and thought that the Egyptians knew the solar year, and employed it to check the progress of the wandering year, and as he did not make use of the mentions of the risings of Sirius in his chronological scheme, it is difficult to think that he attached to them the importance which has been assigned to them by some recent investigators. The present writer has no wish to belittle in any way the importance of the help which astronomical calculations

1. *Aegyptologie*, p. 353.

2. "Weder die eine noch die andere Ueberlieferung des Alterthumes hat bis jetzt durch die Denkmäler ihre überzeugende Bestätigung gefunden." (P. 203.)

3. It contained 500, or 540, or 654, or 972, or 1000, or 7006, or 12,954 years; for the authorities see Torr, *Memphis and Mycenae*, p. 54.

4. "Unter allen Umständen ist so viel sicher, dass der Gebrauch des Wandeljahres unzertrennlich von der Kenntniss eines festen Sonnenjahres gewesen sein musste." (*Aegyptologie*, p. 353.)

may afford the Egyptologist in his chronological difficulties, or to deny their general accuracy, but the variations in the results obtained by the different authorities¹ from the same data must tend to make every one hesitate to accept blindly dates which are declared by their advocates to have been ascertained astronomically, and to be "absolutely certain".²

After the system of Brugsch the only other scheme of Egyptian Chronology worthy of serious thought is that of Prof. Meyer. His work, to which reference has already been made, is undoubtedly a valuable contribution to the subject, and he has stated his case with the skill, learning, and moderation which we should expect from him. Some of his conclusions, however, it is impossible to accept, *e. g.*, the date of B. C. 3315 for the beginning of the reign of Menâ, and the date which he is inclined to assign to the introduction of the calendar, B. C. 4241, is open to many objections. On the other hand, he appears to be correct in shortening the interval between the VIth and the XIIth dynasties, and that between the XIIth and the XVIIIth dynasties, but his shortening of the latter interval is probably too great. It seems to be almost impossible, or at least extremely difficult, to crowd the reigns of five dynasties of kings into

1. See Nicklin in *Classical Review*, vol. XIV, 1900, p. 148.

2. The Rev. F. A. Jones as a result of his examination of the whole precessional cycle of 25,920 years has come to the conclusion that the Great Pyramid was built B. C. 2170(!). *Athenaeum*, No. 4195, March 21, 1908.

about 200 years, which is what must be done if his dates are accepted, and this fact alone will shake the confidence of many in his general conclusions. If Professor Meyer makes the interval too short, Professor Petrie makes it too long — 1666 years — an estimate which need not be seriously considered.

The true reason of such extreme and opposed views on such points of chronology is the absence of facts, coupled with the desire of framers of systems of chronology to explain every thing. The scheme of the XIth dynasty proposed by Mr. Breasted in Prof. Meyer's work, and elsewhere, can hardly be maintained in the light of the results which have been derived from the excavations made at Dêr al-Bahârî by Prof. Naville. The lowering of the dates of kings of the XVIIIth dynasty may be accepted provisionally, especially as it seems to agree with the general trend of the evidence which has been deduced from the Cuneiform Inscriptions.¹ Finality in such matters cannot be expected for some time to come. Throughout Prof. Meyer's work there appears to be a tendency to rely too much on the King List in the Turin Papyrus, which, after all, only represents XVIIIth dynasty tradition. At that period probably less was known about the early

1. See L. W. King, *Chronicles concerning early Babylonian Kings*, vol. I, p. 19. Basing his conclusion on the materials published by Mr. King, Prof. Meyer asserts that no monument found in Babylonia is as old as B. C. 3000. This conclusion agrees with his preconceived belief.

kings than now, and it is clear from the misreading of the names of kings Semti and Sen that the scribes, like modern investigators, were sometimes unable to arrive at right conclusions. Prof. Meyer's monograph contains the ablest statement of Egyptian Chronology which has appeared since the masterpiece of Lepsius, and it merits the study of all those who are interested in the subject.

It is unnecessary to discuss here the period which lies between the reign of Rameses III and Psammetichus I, for the facts will be found in all the Histories of Egypt. The period between Psammetichus I and Alexander the Great is well known, and the admirable work of Prof. Strack¹ has settled the chronology of the Ptolemies.

Palermo Stele, No. 10.

[Names No. 10 ff. are wanting.]

DYNASTIC PERIOD.

ANCIENT EMPIRE.

FIRST DYNASTY. FROM THIS.

Horus name NAR-NIER cf. p. 9

1. Men, Menā (Menes). N-U name MEN

Limestone stele of the priest Unnefer
(Louvre, No. 421, or 328). See E. de
Rougé, *Recherches*, Paris, 1866, p. 31.

Abydos List, No. 1.

Turin Papyrus. (Published in Lepsius,
Auswahl, plates 3—6.)

Turin Papyrus.

Prisse d'Avennes, *Monuments*, plate 47.

2. A-Tehuti, Thetet, or Tetā.

Horus name ĀHA p. 8
Turin Papyrus.

N-U name HET 8
Abydos List, No. 2.

Ebers Papyrus, plate 66, line 16.

Limestone stele of the priest Unnefer (Louvre, No. 421, or 328). See E. de Rougé, *Recherches*, Paris, 1866, p. 31.

Shesh, mother of Tetā Á-Tehuti.

Ebers Papyrus,
plate 66, line 15.

3. Áteth.
Horus name DJER p. 8
Abydos List, No. 3.

N-U name TA ⌂ ⌂

4. Áta.
Horus name DJET p. 8
Abydos List, No. 4.
N-U name ATH ⌂ ⌂

5. Semti.

I. Horus name	TEN. DEV
II. N-U ¹ name	...
III. Golden Horus name	...
IV. Suten Bát name	SEMTI.
V. Son of Rā name	...

I. British Museum, Plaque, No. 32650.

IV. Fragments of bowls, vases, etc., found at Abydos. (British Museum, No. 32664, etc.)

1. N-U = Nekhebit-Uatchit name,

Fragments of bowls, etc., found at Abydos.

Abydos List, No. 5.

Papyrus of Nu (sheet 18).

Lepsius, *Königsbuch*.

Lepsius, *Todtenbuch*, Bl. 53.

Medical Papyrus at Berlin, ed. Brugsch,
Recueil, II, pl. XCIX.

Ebers Papyrus, plate 103,
l. 2.

Papyrus at Berlin (Lepsius, *Todtenbuch*,
p. 12).

Naville, *Todtenbuch*, II, p. 189.

6. Merpeba.

I. Horus name ÄT-ÄB. *A zib*

II. N-U name ...

III. Golden Horus name ...

IV. Suten Bât name MERBAP, or MERBAPEN.

V. Son of Rā name ...

Fragment of alabaster bowl in the British
Museum (No. 32667).

That MERPEBA succeeded SEMTI is proved by the following inscription on a piece of limestone found at Abydos.

7. *Hu, or Nekht, or Semsu.*

I. Horus name	SMERKHA.
II. N-U name	...
III. Golden Horus name	...
IV. Suten Bât name	HU, or NEKHT, or SEMSU.
V. Son of Râ name	...

Sculpture at Wâdî Maghârah (Weill, *Recueil*, Paris, 1904, p. 97).

Ivory plaque. British Museum,
No. 32668.

Abydos List, No. 7.

8. Sen (Qebḥ, or Qebḥu).

I. Horus name	QĀ, or QĀ-Ā.
II. N-U name	SEN, or QĀ, or QĀ-Ā.
III. Golden Horus name	...
IV. Suten Bāt name	QEBSH, or QEBSHU.
V. Son of Rā name	...

Ivory plaque, jar-sealings, etc., found at
Abydos.

Ivory plaque, found at Abydos.

Abydos List, No. 8.

Tablet of Saqqârah.

Bowl fragment, British Museum,
No. 32672.

The kings whose Horus names, etc., follow here probably reigned during the First Dynasty.

2. ~~A~~ Aha.

I.

Ivory plaques (No. 1410, 1412) in the Egyptian Museum at Cairo (Maspero, *Guide*, p. 533 ff.). King ~~A~~ha has been by some identified with Menes (see also British Museum, No. 38010).

II.

Ivory plaque in Cairo (No. 1410). *Men*

Stele in the Louvre (see J. de Morgan, *Recherches*, Paris, 1897, p. 288), and British Museum, No. 32641. On some jar-sealings found at Abydos this Horus name is followed by the signs and therefore king TCHA has, by some, been identified with king of the Tablet of Abydos.

3. ~~K~~hent. *Djcr*

From objects found by Amélineau (*Les nouvelles fouilles d'Abydos*, Paris, Leroux, 1896 ff., see also British Museum, No. 35607). King ~~K~~HENT has been, by some, identified with the TETÄ (or ~~A~~-TEHUTI) of the Tablet of Abydos.

~~4. MER-NET, or MER-Neith.~~

Stele in the Museum at Cairo; British Museum, No. 32645; etc. MER-NET has, by some, been identified with the ATA of the Tablet of Abydos.

THE SECOND DYNASTY. FROM THIS.

6  Betchau.

I. Horus name	<u>NARMER.</u>
Ia. Horus-Set name	KHĀ-SEKHEMUI.
II. N-U name	...
III. Golden Horus name	...
IV. Suten Bât name	1. 2. NETER-BAIU. 3. BETCHAU. 4. BESH.
V. Son of Rā name	...

From a fragment of an alabaster jar found at Abydos; the green slate ^{Paleo}~~object~~ of this king in the Museum at Cairo (Quibell, *Aeg. Zeit.*, vol. XXXVI, p. 81); etc.
NAK-NER p. 3

From a cylinder-seal (J. de Morgan, *Recherches*, Paris, 1897, p. 243).

From a cylinder-seal (J. de Morgan, *Recherches*, Paris, 1897, p. 243).

- IV. 1.  From a cylinder-seal (J. de Morgan, *Recherches*, Paris, 1897, p. 248).
2.  Tablet of Sakkarah.
3.  Abydos List, No. 9.
4.  From a granite vase (Quibell, *Hierakonpolis*, plate 87).

2. *Hetep-Sekhemui.*

I. Horus name	НЕТЕР-СЕКХЕМУИ.
II. N-U name	НЕТЕР.
III. Golden Horus name	...
IV. Suten Bât name	НЕТЕР.
V. Son of Râ name	...

- I.  Statue No. 1 at Cairo (J. de Morgan, *Recherches*, p. 253; Grébaut, *Le Musée Égyptien*, plate XIII). See the stone fragment, British Museum, No. 35559.

- II.  From a cylinder-seal (Maspero, *Annales du Service*, III, 1902, p. 187).
- IV. 

1.  *Ka-kau.*

I. Horus name	RĀ-NEB.
